

Asymptotic Analysis

- ↳ The idea is to measure order of growth.
- ↳ Does not depend upon machine, programming language, etc.
- ↳ No need to implement, we can analyze algorithms.

```
int fun1 (int n)
{
    return  $n * \frac{(n+1)}{2}$  ;
}
Time taken :  $C_1$ 
```

```
int fun2 (int n)
{
    int sum = 0 ;
    for (int i=1 ; i<=n ; i++)
        sum = sum + i ;
    return sum ;
}
Time taken :  $C_2 n + C_3$ 
```

```
int fun3 (int n)
{
    int sum = 0 ;
    for (int i=1 ; i<=n ; i++)
        for (int j=1 ; j<=i ; j++)
            sum++ ;
    return sum ;
}
Time taken :  $C_4 n^2 + C_5 n + C_6$ 
```

Example values :

$C_1 = 13, C_2 = 2, C_3 = 5$

$fun1() = 13$

$fun2() = 2n + 5$

$13 = 2n + 5$

$n = 4$

Time
taken

$$n + 1 \geq 1000$$
$$\boxed{n \geq 999}$$

, After 999,
 $\text{fun2}(n)$ is going
to take more
time
